Feature Requirements

Description of the Problem

Current backup/restore works at the container level. This can be expensive when only a few objects have changed in a large container.

Description of the requested features

- Incremental backup by pages.

Part of an optional feature or does it require another feature? If so, which one?

DBA tools.

How is this problem being solved now, and why isn't that acceptable?

Which languages must support this capability?

DBA tool.

Which platforms must be supported?

All.

Do any competitors already have this capability?

Versant, ODI, Oracle, IBM

Customers who require this capability:

All would benefit.

Revenue at risk or which could be won:

TBD.

When is this required?

R8.0
