Bodégro Technical Automation is a young and inventive company. The mission statement is: "To develop and advise on systems for technical applications for which custom made software dictates the functionality of the system. Quality integration of the information system and the way the end-users operate are a key component".

Bodégro Technical Automation focuses mainly on labs and has experience with technologies like:

- Screen Processing;
- Chemical Metrics.
- Chromatography;
- Electrical Chemical;
- Spectrometry (e.g. ICP-MS/OES)

Bodégro Technical Automation combines this knowledge with the following IS standards to implement quality information systems:

- Object Orientation;
- 32-bits implementation (WinNT 4.0);
- Microsoft Foundation Class Library;
- Intranet and internet;
- ActiveX / COM;
- Artificial Intelligence

Buying Criteria

- The development of the Dutch market. If Bodégro Technical Automation feels that there is a demand for Objectivity they will buy a partner license.
