

Objectivity Case History

Customer Information

Customer: Lockheed Martin Federal Systems
Industry: Government
Application Domain:
Status: Pre-purchase
Platform: IBM RS6000, SGI
Compiler: C++
Other Tools: Rational Rose

Buying Criteria

This particular group of Lockheed Martin Federal Systems does work for the DOD/Intelligence Community. Most of their projects are classified. They required something that could outperform the traditional RDBMS, such as Oracle and Sybase. Their applications require loading of large amounts of complex data and the need for continuous uptime.

Why Objectivity

The factors that were key for their decision to use Objectivity:

- 1) Objectivity enables a large, distributed environment
- 2) Objectivity allows 24 hour uptime
- 3) With Objectivity they can scale far beyond what can be done with relational
- 4) Complex data type support
- 5) Heterogeneity, especially between C++, Java and SQL bindings
