## Data Acquisition for W7X Databases and Datamanagement

Max-Planck-Institut für Plasmaphysik  
EURATOM Assoziation, Boltzmannstr. 2, 85748 Garching  
RZG Garching, XDV  
Josef Maier and XDV-Team

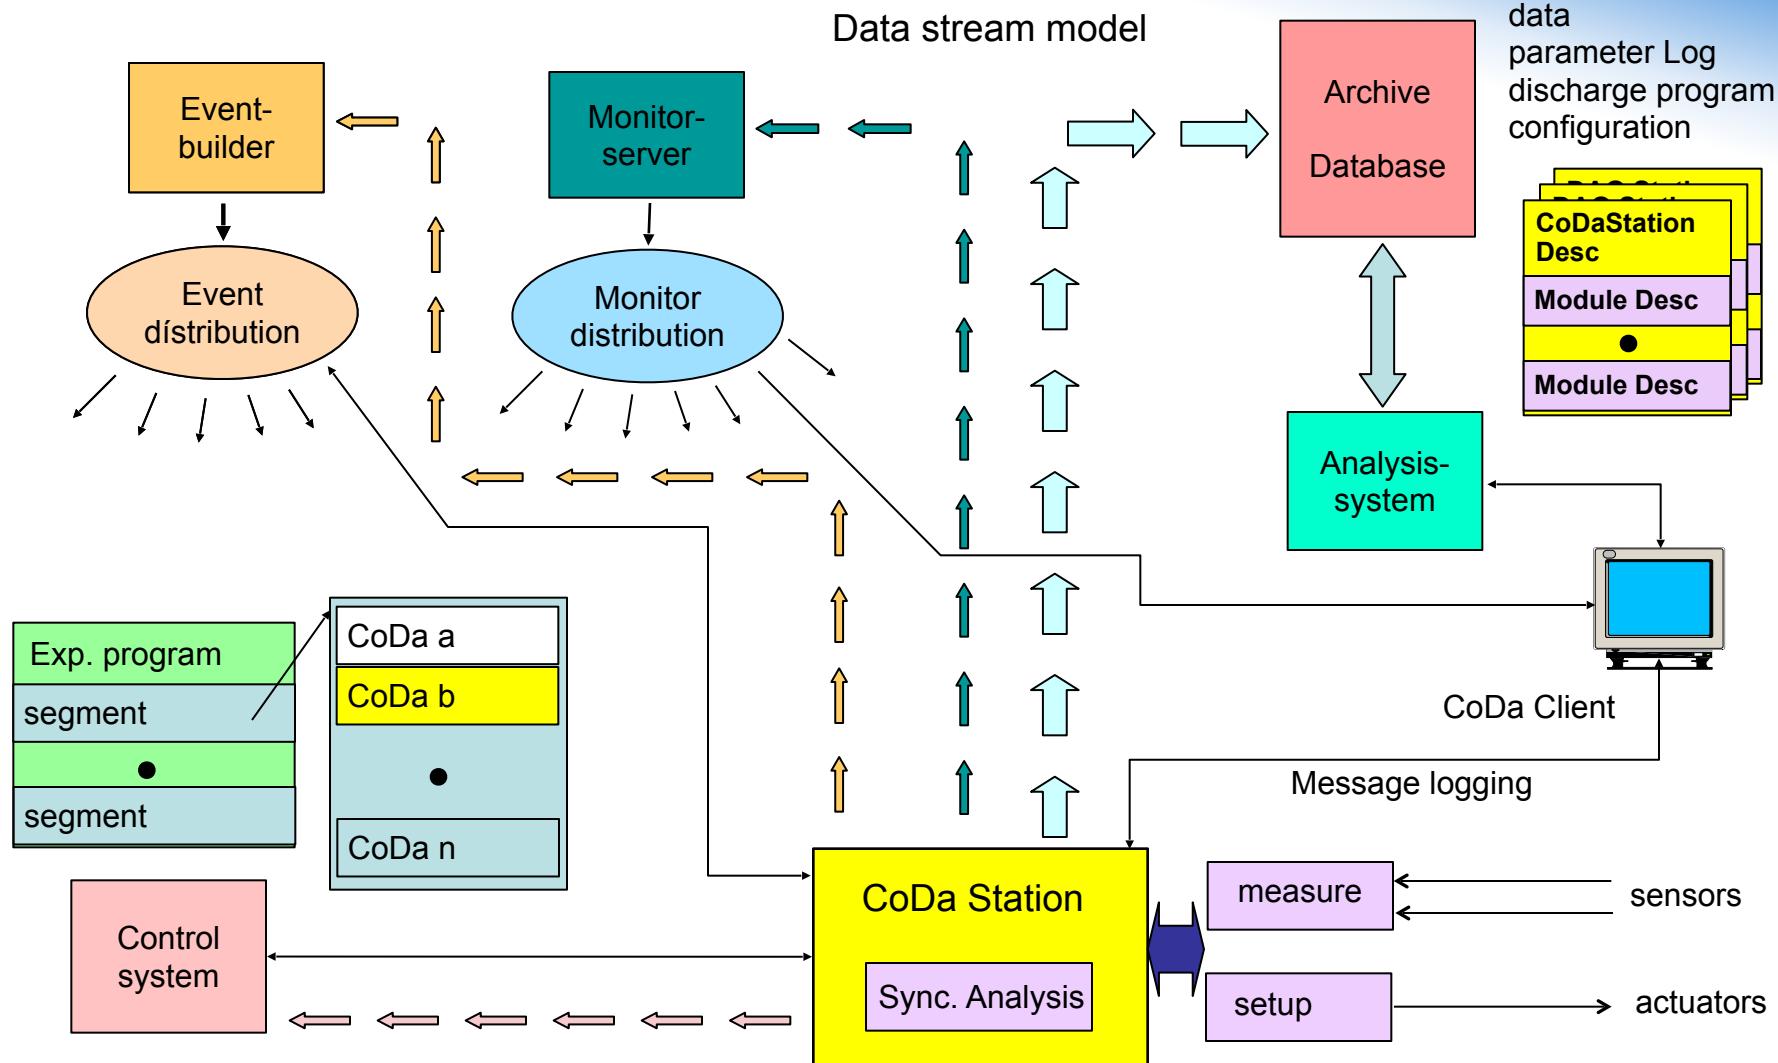

# Fusion on Sun and in Laboratory

# W7-X Stellarator

# Data Acquisition System

# Databases

## Configuration database for

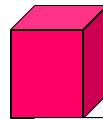

- module descriptors
- parameters
- discharge control

## Archive database for datastreams

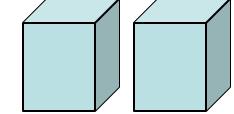

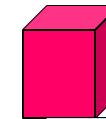

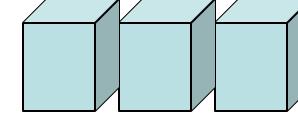

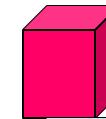

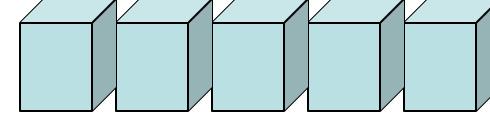

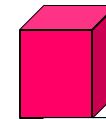

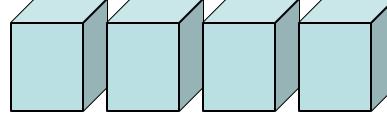

- measured data from the CoDa-Stations
- preprocessed or processed data
- parameter and configuration history

# Data- and Parameterstreams in Archive

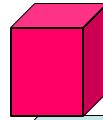

**Param 1**

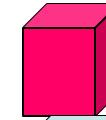

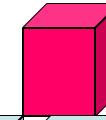

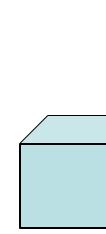

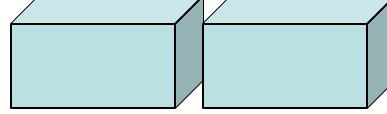

**Datastream 1**

**Param 2**

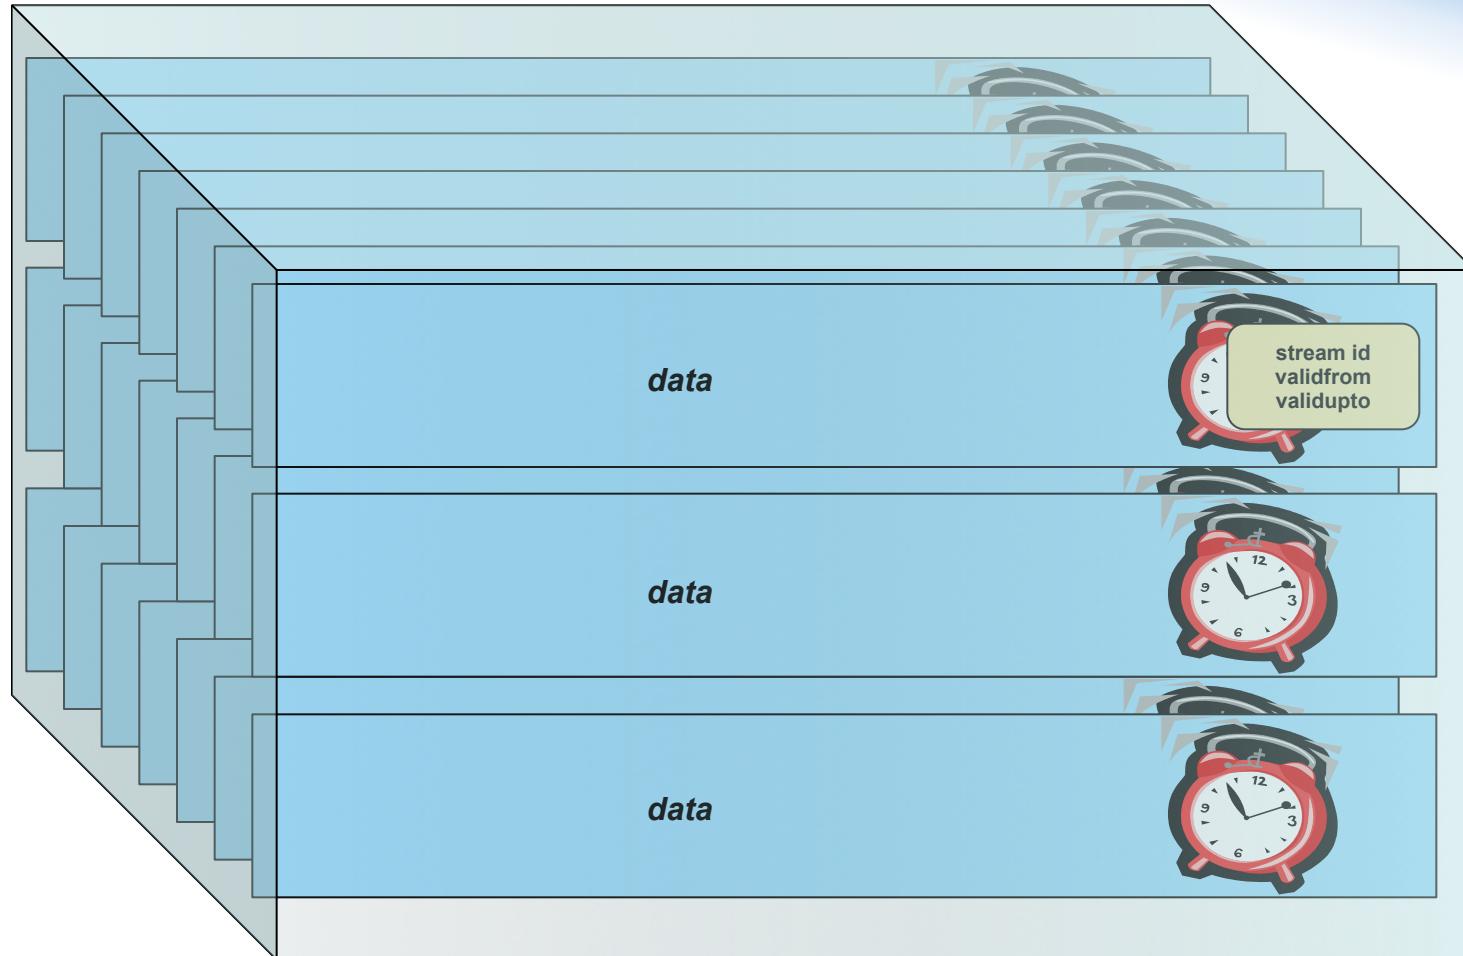

**Datastream 2**

*time*

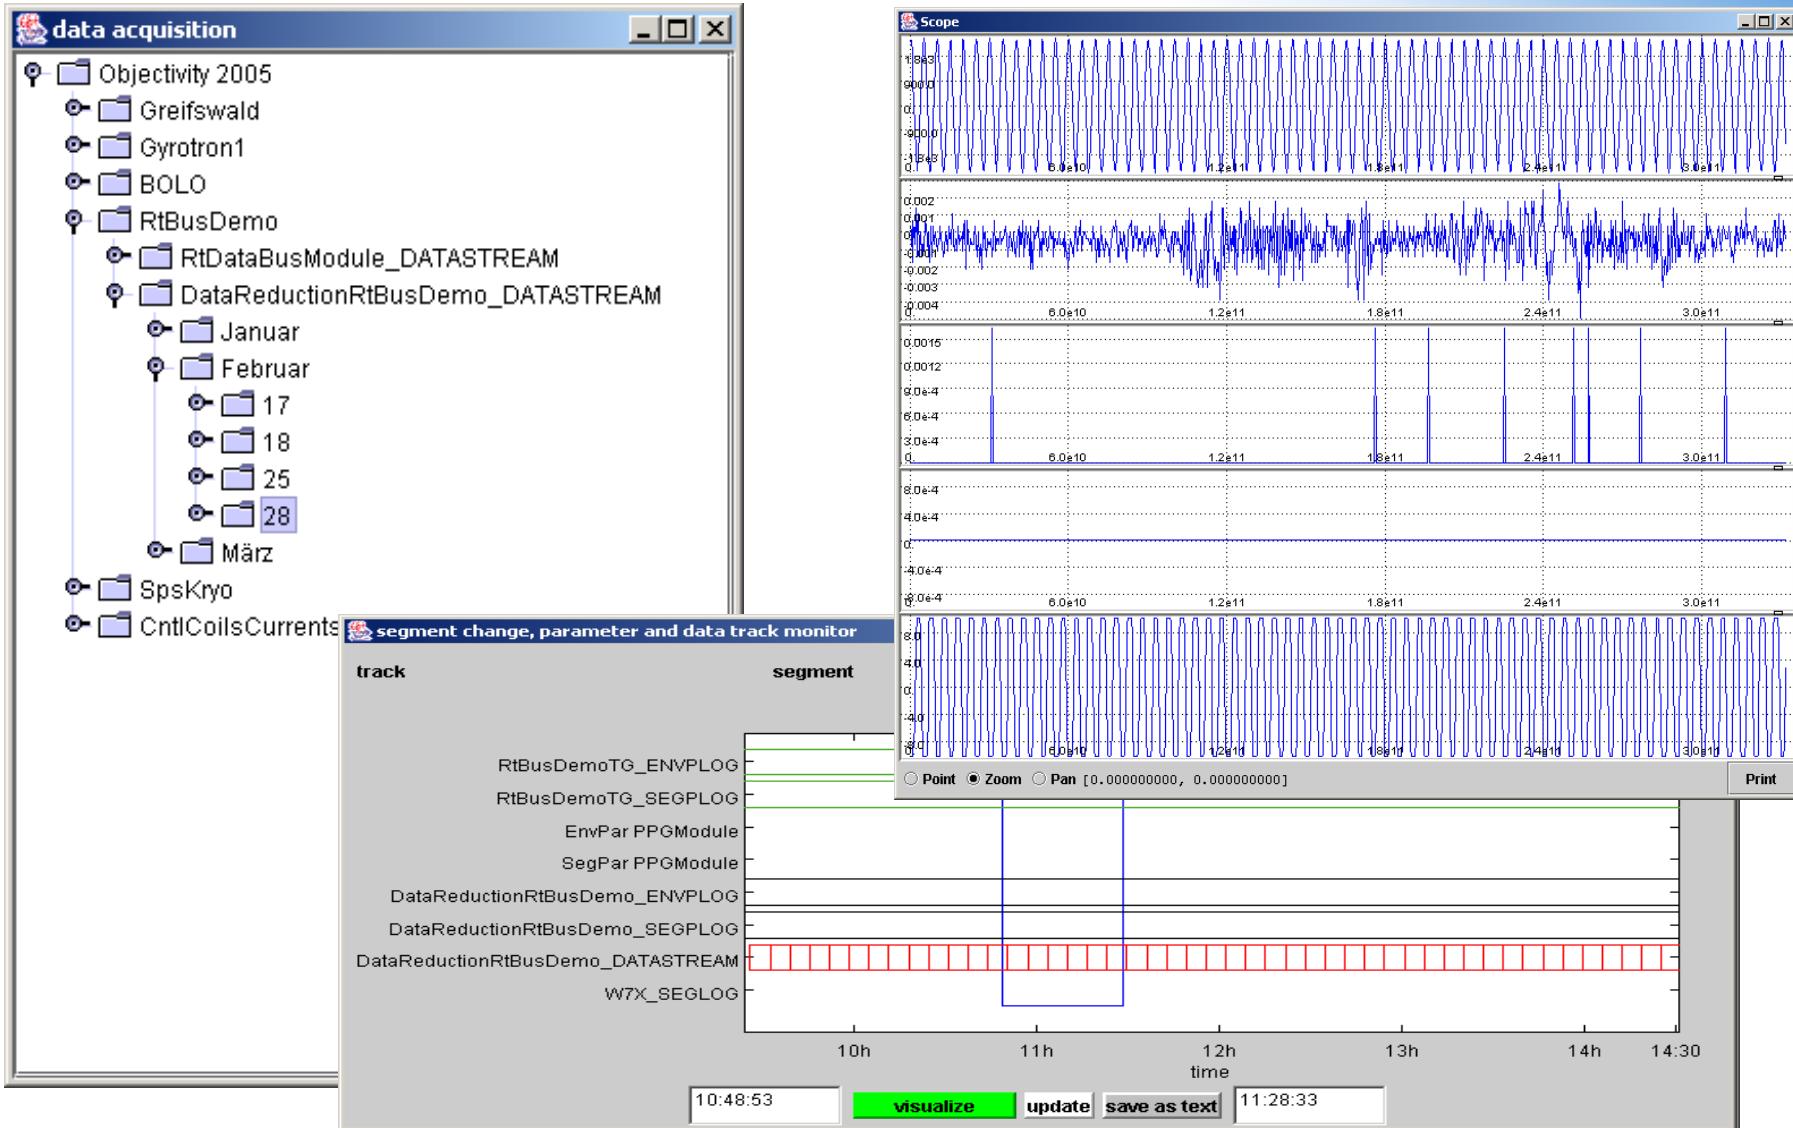

# Datastreams and Databoxes

*full databox*

# XDV-ObjyBrowser - Screenshots

# Basic Database User Interface

## API objyaccess for database access: (XDV Development)

*initAccess()*  
*termAccess()*

*Common*

*archiveBox()*  
*getBox()*  
*getData()*  
*getBoxIntervals()*  
*checkBoxExistence()*

*Archive Database*

....

*addObject()*  
*getObject()*  
*updateObject()*

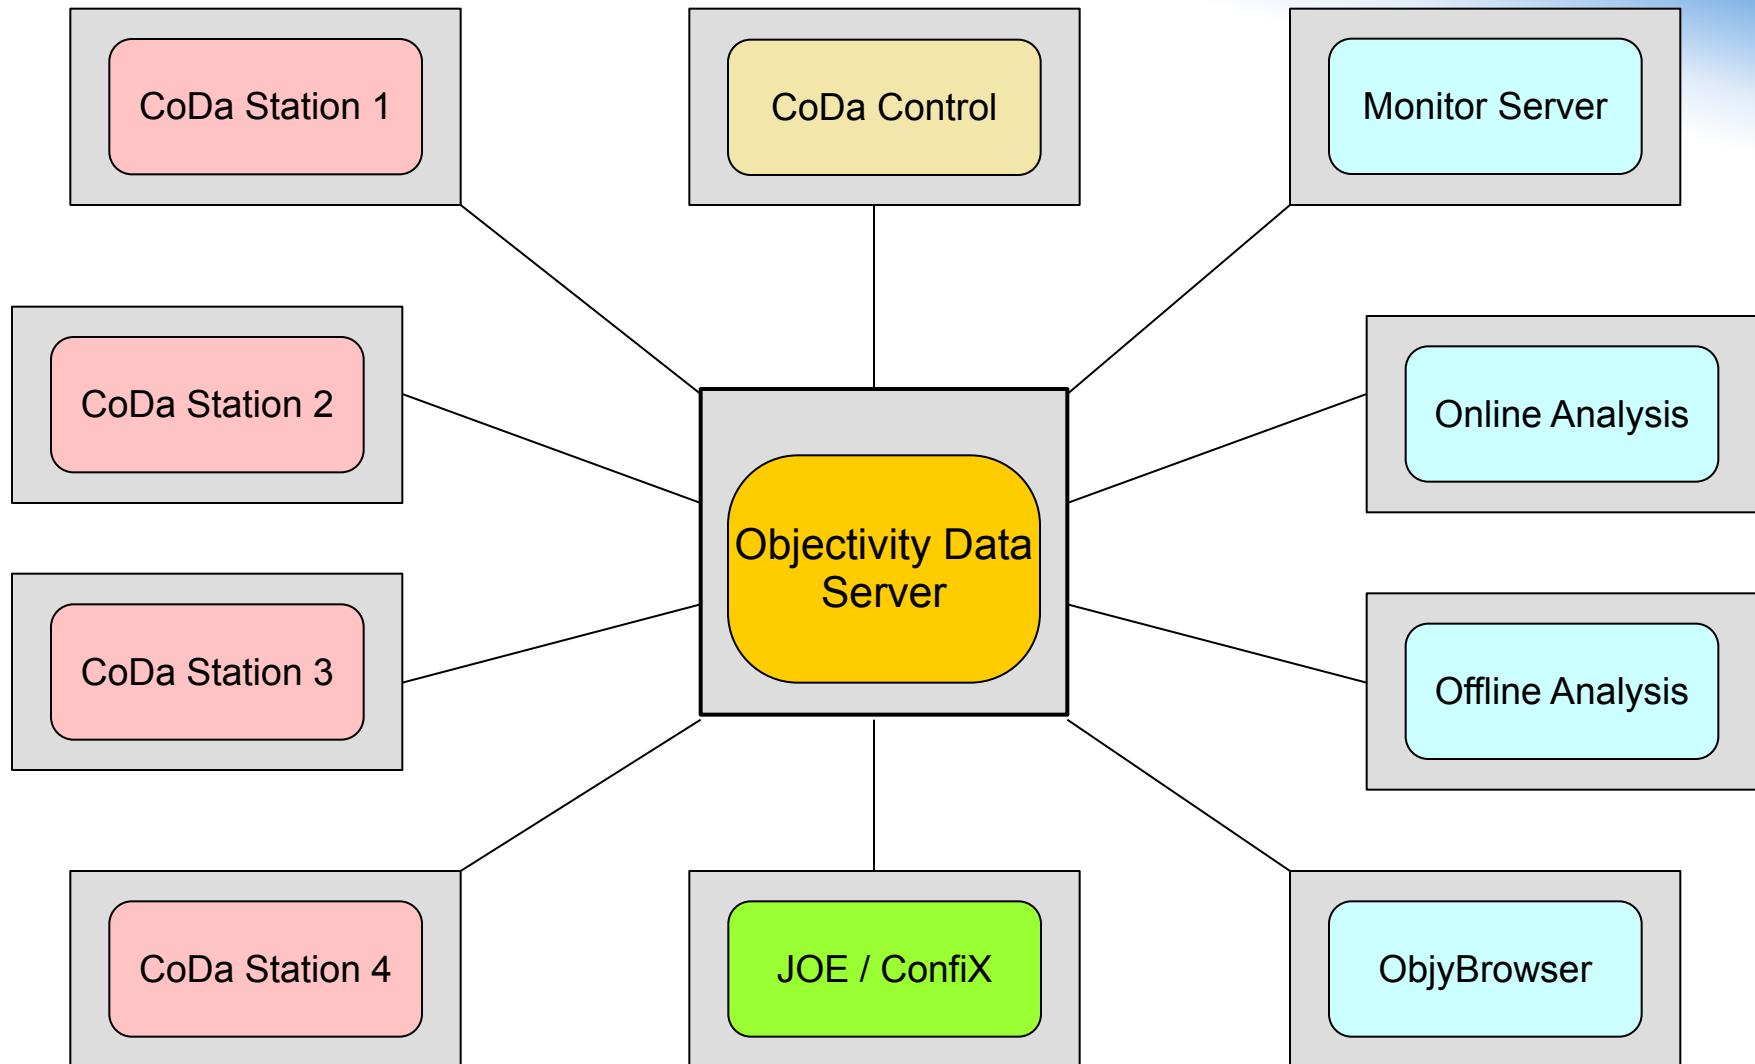

*Configuration Database*

....

# Database Access

- Basic JAVA objyaccess library (XDV developed)
- XDV-ObjyBrowser
- JavaScope
- Jython and IDL
- C++, C, SciLab
- Configurations editor XDV-ConfiX
- Java Object Editor XDV-JOE

# Prototype System

# Status Summary

- Data structures defined
- Database established
- Data access procedures implemented
- Two successful prototype demonstrations
